Browse server, network, & data center racks, cabinets, shelves, & cable managers from a premier manufacturer of high-quality, scalable IT solutions.

Today, 48V power architecture is becoming the standard for hyperscale data centers. Companies like Facebook, Microsoft, and Amazon, in addition to Google, have ...

Try the Rack Power Architecture Efficiency Calculator in our Tradeoff Tool Library. The calculator allows you to analyze the power ...

This system, combined with the availability of 48V DC-powered IT equipment from major manufacturers, makes DC power an ideal solution for small and midsize data centers seeking ...

48 V power distribution architecture for hyperscale datacenters and AI servers - high efficiency and high power density applications.

For instance, power supply firm Advanced Energy welcomed the inclusion of 48V power shelves: "Traditionally, data center racks have ...

Transitioning to 48V is about more than voltage--it's about reliability. Power shelves in server racks use busbars to distribute electricity, and the connection points between busbars, cables, ...

Facebook's Open Racks are backed up by UPS systems with battery cabinets that provide 48V DC power. The Open Rack spec ...

A 48V server rack battery is a high-capacity, compact energy storage solution designed for data centers and

critical power applications. It delivers stable 48-volt DC power with high efficiency, ...

In 2016, Google introduced a 48V rack power architecture designed to replace traditional 12V systems, marking a major shift in ...

In order to meet the industry's new power requirements, MPS has developed solutions for a more efficient power architecture, using a 48V distribution voltage that is capable of a 16x reduction ...

Data centers adopted many things from telecoms, including the ubiquitous 19-inch rack. But even though electronics run on DC, data ...

The evolution from legacy 12-V server racks to 48-V racks is expected to reduce energy losses by over 30%, highlighting the clear ...

There is an industry need to increase the power density per rack to about 100kW compared to current data centers, which max out at only a 20kW power rating. MPS develops ...

Artesyn Embedded Power is introducing a new Open Compute Project Open Rack version 3 (OCP ORv3) power shelf, designed to support the move to 48-volt data center ...

It deploys 12V server trays into its 48V data center racks occasionally, but tries to avoid it whenever possible. The reason providing 48V to the motherboard is more efficient is ...
