How much solar power will Croatia have by 2030?

The Croatian government has set an ambitious target to reach 2.5 GW of installed solar capacity by 2030, a goal that would significantly contribute to the country's renewable energy mix. This target also aligns with the European Union's broader objective of increasing the share of renewables in electricity generation.

How much energy will Croatia have in 2024?

The report also projects that total capacity could reach 1.5 GW by 2025 and 2.5 GW by 2030. Data from the Croatian Energy Regulatory Agency (HERA) confirms this trend, with installed capacity reaching 902 MW by the end of September 2024. This marks a substantial increase from the previous year, as 243 MW of new capacity was added in 2024 alone.

Why should Croatia invest in solar power?

As Croatia continues to invest in solar power, the country is positioning itself as a regional leader in renewable energy. A successful expansion of its solar capacity will serve as a model for other countries seeking to transition to cleaner energy sources.

Why is Croatia's solar market growing so fast?

A key factor driving this growth is the government's commitment to a favorable investment climate, offering incentives like feed-in tariffs, tax breaks, and subsidies designed to attract more investors and developers to the Croatian solar market.

Success stories of community energy projects can be found all over the world. At REScoop we want to highlight these stories to further accelerate the movement towards a ...

Of the total global Solar PV capacity, 0.01% is in Croatia. Listed below are the five largest upcoming Solar PV power plants by capacity in Croatia, according to GlobalData's ...

A coffee break in the city's very center is a quite unexpected starting point for a most interesting and pleasant solar system lesson. When you're in Zagreb, the Sun, Mercury, Venus, Pluto...

Discover the wonders of our solar system at Mercury - Grounded Solar System, a unique celestial attraction in Zagreb that combines education and exploration.

The potential for solar energy in Croatia is estimated at 6.8 GW, of which 5.3 GW for utility-scale photovoltaic plants and 1.5 GW for rooftop solar systems.

Croatia Solar Capacity Surpasses 1 GW: A Stunning Achievement in 2025
