How many cells are in a Tesla battery pack?

Tesla organizes its battery packs into modules that house groups of battery cells. For example, the Tesla Model S has 16 modules in its battery pack. Each module consists of roughly 6,000 lithium-ion cells. Conversely, the Tesla Model 3 contains 4 modules, each with around 2,000 cells.

What is the difference between a battery pack and a module?

**Mechanical Support:** Modules are housed in sturdy frames to provide structural integrity and protect cells from physical damage. A battery pack consists of multiple battery modules integrated to form a complete energy storage solution. Packs are engineered to deliver the required power and energy for specific applications.

How many cells are in a BMW i3 battery pack?

An instance of this configuration is the BMW i3's battery, which contains a total of 96 cells. In this arrangement, 12 cells form a module, and eight modules combine to create the battery pack.
