Why do you need a solar house?

It's beneficial for the environment as well as helps you cut power bill expenses. To make it run, you will need some key components including storage systems and solar panels, which are sometimes available as complete solar house kits. Having solar panels makes smart financial sense as power gets more costly.

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.

How do I build a solar powered home?

Build Your Solar-Powered Home! Five basic components--Solar panels, inverters, mounting systems, specialized wiring, and monitoring equipment--are needed running a house on solar power. Success depends on your ability to appropriately size your system, estimate solar availability, determine your energy demands, and get required permissions.

Does a home solar power system solve your problems?

If you answer yes to the last two questions, a home solar power system solves your problems. There are three different solar power systems available on the market for homes. The differences between the three come down to your connection with the electrical company. Let's go into details on the three home solar systems:
