What is an emergency lighting backup inverter?

An emergency lighting backup inverter is a device that converts DC battery power to standard AC voltage to provide backup for various lighting systems, including fluorescent and LED lights, in an emergency.

How do I choose a backup lighting system?

Review the specs on our UPS systems to find a match for your backup lighting needs. Then, choose from standard lead acid or lithium ion battery power options. With reliable UPS systems powering your emergency lighting systems, you'll be able to navigate outages safely. Learn more about two of our top UPS models for emergency backup lighting.

What is a battery backup emergency light?

Battery backup emergency lights (often called "unit equipment") are standalone fixtures with integrated batteries. During normal power, they charge and stay on standby. When the power does fail, they automatically take over--keeping halls, stairs, and exit paths lit for at least 90 minutes.

How reliable is the led emergency battery backup?

Reliable emergency backup performance for standard voltage ranges (120-277V). Designed for higher output fixtures up to 300W with universal voltage support (120-480V). The LED Emergency Battery Backup is moderately priced and loaded with all the options you'll need to ensure safety for the occupants of your space.
