-----

The intense economic growth leads to a rapidly rising global energy consumption in various forms, which unavoidably significantly increases greenhouse gas emissions. Hence, ...

This study proposes a multi-energy complementary system (MECS) based on solar and biomass to address the energy consumption inefficiency of rural buildings, with Shangluo ...

Fluctuating renewable energies and loads challenge the wide-spreading of the clean and sustainable multi-energy complementary distributed energy system.

Multi-energy Complementary Distributed Energy System (MCDES) is an integrated system of energy production, supplying and marketing through the organic coordination and ...

The multi-energy complementary ecosystem (MCE) has the advantage of making full use of renewable energy and removing the dependence on carbon-based energy, which ...

This paper begins by elucidating the background and significance of multi-energy complementarity. It then provides an overview of multi-energy complementary systems, ...

Against the backdrop of evolving power systems and the increasing integration of wind, solar, thermal, and storage technologies, scientifically optimizing the configuration of ...

Hence, supplying energy demand and mitigating CO<sub>2</sub> emissions should be urgently addressed simultaneously. This study presents a new combining system comprising a ...

Sun et al. [11] proposed a multi-energy complementary heating system for rural households, considering solar

energy storage, biomass, and air-source heat pumps.

Integrating a carbon dioxide energy storage system (CES) with an integrated energy system (IES) can significantly enhance renewable energy utilization, reduce carbon emissions, ...

Abstract Building clean and modern multi-energy complementary systems is a direct path to decarbonization in energy sector. The introduction of hydrogen energy with high ...

Multi-energy complementary distributed energy system (MECDES) is an important development direction for the energy system. ...

This paper proposes an optimal scheduling strategy for a gas-liquid phase change CES coupled with wind and solar generation, considering multi-layer low-carbon benefits.

Multi-energy complementary integrated energy system (MCIES) is considered as a promising solution to mitigate carbon emissions and promote carbon peak...

As an important supporting technology for carbon neutrality strategy, the combination of an integrated energy system and hydrogen storage is expected to become a ...

For the first time, this paper proposes a cooperative planning model of multi-energy system and CCUS considering the regional CO<sub>2</sub> availability. In this model, the multi-energy system and ...
