How much does ESS cost per substation?

Twenty-five percent (25%) demand reduction would result in \$166,140 annual savings per substation. The maximum ESS cost to realize a 10-year ROI would be approximately \$1,661,400 per substation(based on current demand power rate). Avoided Generation Capacity Costs (AGCC).

What are solar energy cost benchmarks?

These benchmarks help measure progress toward goals for reducing solar electricity costs and guide SETO research and development programs. Read more to find out how these cost benchmarks are modeled and download the data and cost modeling program below.

How efficient is a residential PV system in 2024?

The representative residential PV system (RPV) for 2024 has a rating of 8 kW dc (the sum of the system's module ratings). Each module has an area (with frame) of 1.9 m² and a rated power of 400 watts, corresponding to an efficiency of 21.1%.

How much would a 25% reduction in peak demand save a substation?

A 25% reduction in peak demand power across the 7 Line would save 78000 kW of demand power and approximately \$2,159,820 in demand charges annually. Twenty-five percent (25%) demand reduction would result in \$166,140 annual savings per substation.

Based on over 7,000 commercial electricity rates currently available, electricity cost for DCFC varies greatly. In particular, at low electricity use, rates with demand charges show high ...
