What is an IP55 rating in outdoor cabinets?

The IP rating on enclosures is an international protection standard that indicates how well the cabinet is protected against two factors: the ingress of dust or solid particles, and the ingress of water.

Should I Choose IP55 or IP56 cabinets?

If the cabinet will be installed in a region with heavy rain, storms, or high-pressure cleaning, choose IP56. For areas with light rain and moderate conditions, IP55 is sufficient. IP55 cabinets are more cost-effective and suitable for standard applications. IP56 cabinets are more expensive but necessary for harsher environments.

What is an IP55 rating?

The correct IP classification directly affects the stable operation of installed equipment. One of the most widely used protection levels is IP55. In this article, we explain what an IP55 rating is, how protection against dust and water is achieved, and which design features allow an IP55 enclosure to withstand outdoor and industrial environments.

What is an IP55 enclosure?

IP55 enclosures offer a balanced level of protection for outdoor telecom, electrical, and industrial equipment, providing reliable performance across most climate zones. When properly selected and equipped, they ensure long-term operational stability even in demanding conditions.

Designed for the telecommunication industry, our outdoor telecom enclosures with standard features that include HVAC climate control, electrical load panel and side spool cabinet can be ...
