Who is responsible for a project under an EPC contract?

A single contractor has complete responsibility for a project under an engineering, procurement and construction (EPC) contract. EPC refers to both the type of construction contract and the project delivery method, and it is often used for large-scale construction projects. It offers fixed costs and a single, experienced point of contact.

What is EPC Contracting?

EPC contracting is a project delivery method where a single contractor takes on the responsibility for all aspects of a project: design, engineering, procurement of materials, and the actual construction. This integrated approach aims to streamline project delivery, ensure quality, and manage risks effectively.

What is EPC project delivery?

EPC Project Delivery: Engineering, Procurement, and Construction in a seamless workflow. EPC delivery has been used in some of the world's most complex infrastructure and industrial projects. These real-world examples show how the model streamlines execution, controls costs, and manages risks in large-scale developments.

What is an engineering procurement & construction (EPC) contractor?

For a project owner, navigating the multifaceted demands of bringing a vision to life--from initial design to final handover--can be daunting. This is where an Engineering, Procurement, and Construction (EPC contractor) steps in, offering a turnkey solution to manage the entire lifecycle of a construction project.
