Does Ukraine need a long-term energy system?

More than ever, Ukraine needs support to transition towards a long-term energy system that is resilient, flexible and secure. The EU has the expertise, the ability and the will to help make that happen. Ukraine's energy systems have suffered significant damage since the full-scale invasion of 2022.

Does Ukraine need a decentralised energy system?

The war has underscored the need to decentralise Ukraine's energy system. This shift aligns with the expertise of companies, whose operations reflect the EU's decentralized energy model that Ukraine aspires to emulate. However, preparedness for missile or drone attacks on energy infrastructure requires measures beyond decentralisation alone.

How can Ukraine achieve its energy goals?

Reaching these goals will require a shift--not only in technology, but in the structure of its energy system. To support this, UNEP and IRENA have launched a multi-year, multi-city, Local Integrated Energy Systems programme in Ukraine, with support from the Government of Italy.

What happened to Ukraine's energy production & distribution facilities?

The Kremlin's forces have been striking Ukraine's energy generation and distribution facilities almost daily. Attacks on November 25 alone left more than 40,000 people without power in the Kyiv region, 20,000 in Odesa, 13,000 in Chernihiv, 21,000 in Dnipro, and more than 8,000 in Kharkiv.

Reaching these goals will require a shift--not only in technology, but in the structure of its energy system. To support this, UNEP and IRENA have launched a multi-year, ...

INTRODUCTION In September 2024, ACAPS" Ukraine Analysis Hub published Energy Infrastructure Attacks: Outlook and Impact During 2024-2025 Cold Season. The report ...

Despite concerns in Ukraine and the West, and contrary to Russia's expectations, Ukraine's energy sector is still standing strong ...

More than ever, Ukraine needs support to transition towards a long-term energy system that is resilient, flexible and secure. The EU has the expertise, the ability and the will to ...

As Ukraine looks to rebuild its energy sector following a recent acceleration in attacks by Russia, pursuing a more decentralised electricity system would help ensure reliable ...

At the same time, it is technically possible to coordinate the operation of nuclear and pumped-storage stations in a single technological cycle on the basis of the combined use of reservoirs ...

Our enterprises generate electricity at wind, solar and thermal power plants, distribute and supply electricity to end consumers, extract natural gas and mine coal, trade energy resources on ...

Russia and Ukraine accused each other on Friday of blowing up a Russian gas pumping station in a border area where Ukrainian ...

This initiative demonstrates the vast potential and advantages of solar energy for Ukraine, paving the way for a more resilient and sustainable future. By ...

Integration with ENTSO-E, the European Network of Transmission System Operators for Electricity, allowed Ukraine to import ...

Reaching these goals will require a shift--not only in technology, but in the structure of its energy system. To support this, ...

Energy Ukraine's energy landscape is at a pivotal juncture, with pressing needs to address deteriorating infrastructure and align with European ...

Discover 8 groundbreaking solar and wind energy projects shaping Ukraine's future, boosting clean energy, and leading its green transformation.

Before the synchronization with the ENTSO-E only a small part of the Ukrainian energy system known as the trading zone "Burshtyn ...

Integration with ENTSO-E, the European Network of Transmission System Operators for Electricity, allowed Ukraine to import 1.8 GW of electricity during harsh missile ...

Since the beginning of Russia's invasion in February 2022, Ukraine's energy infrastructure has suffered

massive damage. The war has not only ...
