Sunny summer conditions delivered record photovoltaic (PV) production across much of western Europe in June 2025, as high pressure systems brought sustained clear ...

This March marked the third month in a row that Europe broke a historic power generation record. According to Eurelectric, solar now accounts for over 10% of the continent's ...

Hungary has achieved a major renewable energy milestone with solar power reaching a 25% share of the country's energy mix in 2024--the highest in the world, reports ...

How solar power, electrification and flexibility can help secure a bright future for Europe's energy transition

Perfect for urban families by enabling solar energy generation combined with battery storage, reducing reliance on traditional power sources. Provides backup power during ...

Looking ahead, for solar to continue meeting EU targets and providing low-cost energy to European citizens and companies, the EU and its Member States must improve the ...

Solar thermal technologies can be deployed in most European regions and are a particularly good option in Europe's eastern and south-eastern ...

The highest solar potential is concentrated in the Iberian Peninsula, the lowlands of Romania, and parts of Central-Eastern ...

Home Explainers How is EU electricity produced and sold? At EU level, renewables make up the largest share of power generation, ...

Western european home solar power generation systems
